START BUILDING

The Corporate Brain that puts AI agents to work

Your company's knowledge, processes and rules in one place. One personal corporate assistant in one messenger, and agents that do real work by your processes, under your control.

Documentolog · since 2007 Kazakhstan · UAE d8n.ae

THE PROBLEM

AI is everywhere. What agents lack is context and a process to work in.

01

The agent cannot see the contract

It drafts a reply to a customer letter without the contract, the history or the agreed terms behind it.

02

Two versions of one policy

Two departments follow two versions of the same regulation, and the agent repeats whichever it finds first.

03

Nobody told the agent

A decision was taken at yesterday's meeting. The agent keeps working the old way.

Models are becoming a commodity. The value is in knowing how your company works, and in giving agents a process with clear rules.

THE IDEA

From many windows to one personal assistant

d8n changes, step by step, how people work with corporate systems. Every employee gets one personal corporate assistant, in one messenger, for every connected system, task and process: corporate mail in Gmail, Outlook or any standard mail service, calendar, CRM, documents. The familiar interfaces stay available, but the work itself moves to the assistant: it gathers context, prepares the work and carries it out after a yes.

Full control. The assistant sees only what the employee's role allows, asks for approval where your rules require it, and every action is logged.

Closed perimeter. Everything can run inside your own environment: on your servers, in your country, with a local LLM.

Your systems and their interfaces stay in place

ERP | CRM | Email | Calendar | HR system | Contracts | Spreadsheets | Portals

↓ the work moves to one assistant

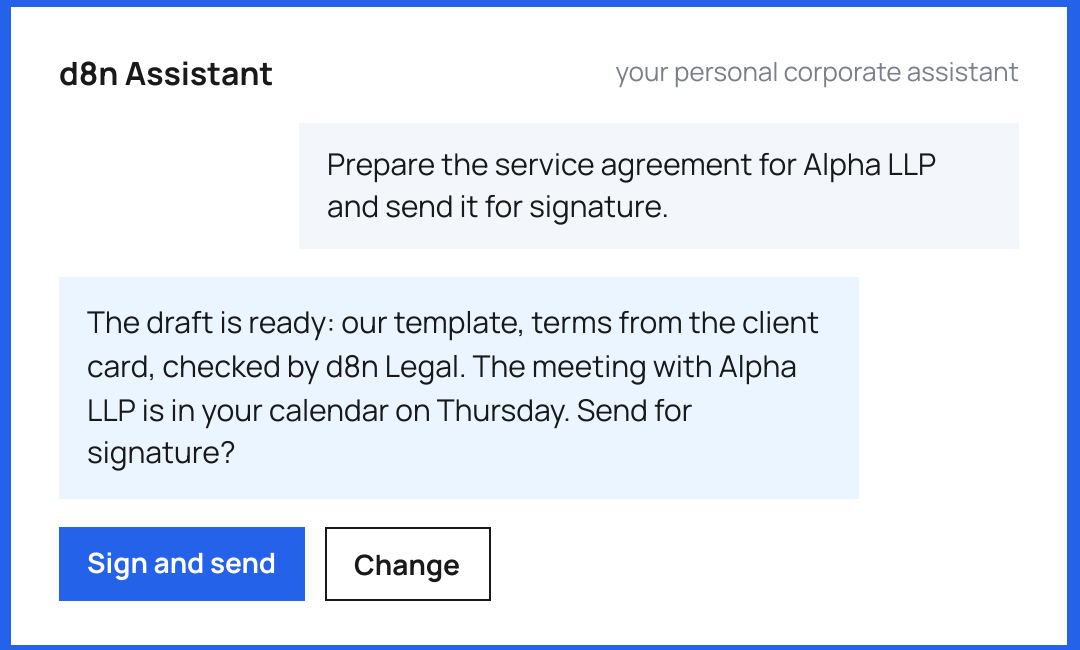

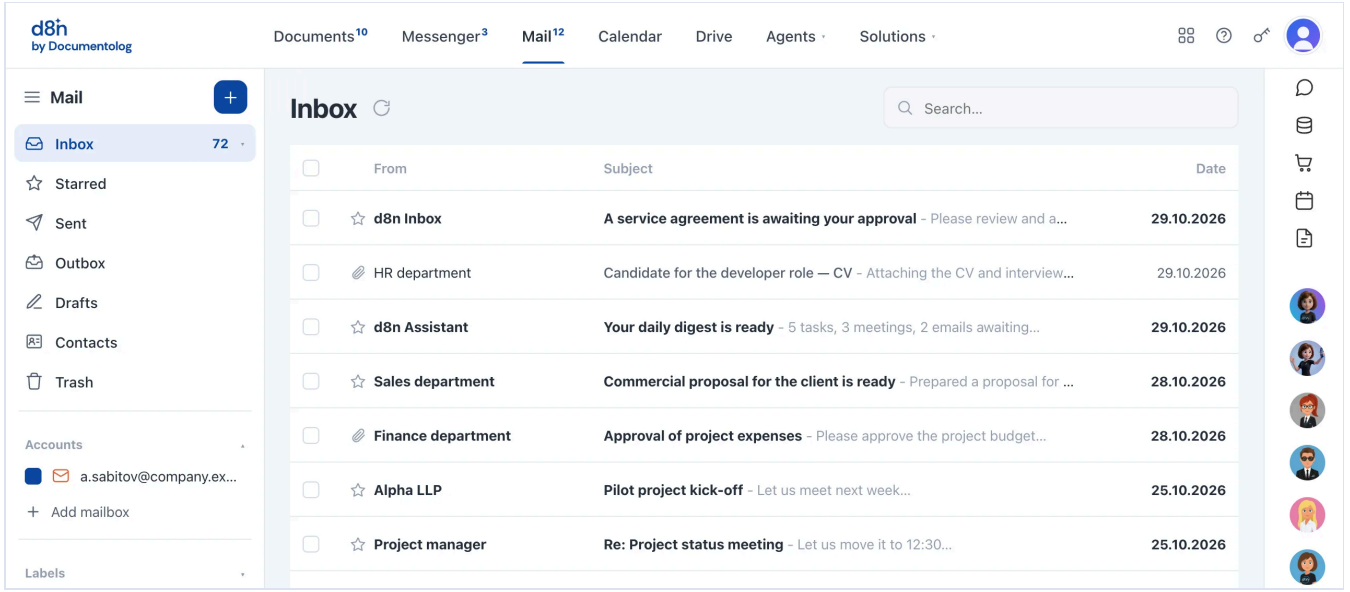

Illustration with sample data.

ONE INTERFACE

Mail, calendar, processes, clients, contracts and HR in one place

Corporate mail	Calendar
Documents	Processes
Clients	Contracts
HR	Finance
Drive and archive	Messenger

Company knowledge and AI agents

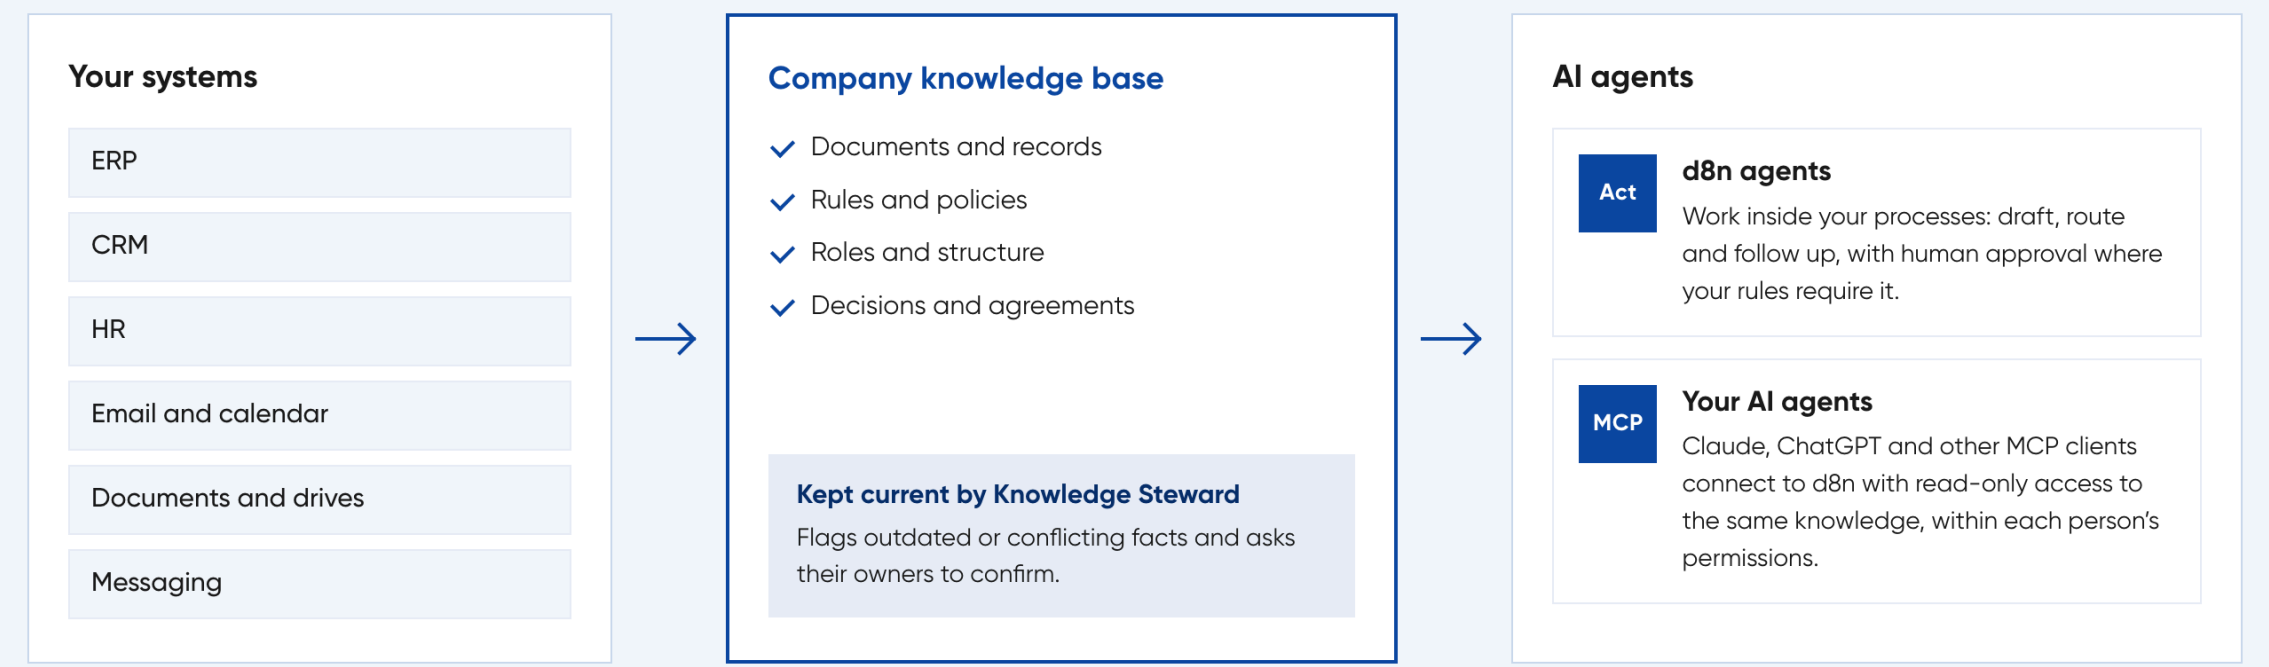

d8n workspace, Mail module. Sample data.

All of it is run by AI agents that understand your processes and know your company. Systems you already use connect to the same place.

THE CORPORATE BRAIN

From the systems you already run to agents that know your company

1 · Connect. Integrations and MCP. Nothing has to be replaced.

2 · Build. Every answer links to its source document.

3 · Keep current. Knowledge Steward sends conflicts to their owners.

4 · Put to work. Agents act in processes; every action is logged.

ANY AI MODEL

Use the best AI brains. Keep your rules, data and people in d8n.

Models change every few months. Your company's rules, processes and regulations should not. d8n is the corporate system where people actually work, and you choose which intelligence to connect.

Outside

External AI through MCP

Claude, ChatGPT, Codex, Qwen, models via OpenRouter and any other MCP client connect to d8n.

Protected

Protected MCP connector

A d8n security agent checks what goes out against your company's rules. Restricted and sensitive information is not released. The administrator decides who may connect and to which sections; every call is logged.

Inside

Closed-perimeter LLM

A local model on your servers, in your country. No data is sent to external models.

When you allow an external assistant, the text it reads is processed on that assistant's servers. Signing and sending stay in d8n, with a person. Claude is a trademark of Anthropic; ChatGPT and Codex are trademarks of OpenAI; Qwen is a trademark of Alibaba Cloud; OpenRouter is a trademark of OpenRouter, Inc.

HOW AGENTS WORK

Agents work by the process, not around it

Each process has an owner and a route. For every step the company decides what the agent may do.

On its own

Routine steps

Register an incoming document, check details and attachments, route it to the owner, remind about the deadline.

After approval

Steps with consequences

Send a reply, sign, change a record. The agent prepares everything; a person says yes.

Never

Decisions reserved for people

Whatever the company keeps for people. Unclear cases go to an employee, with the agent's notes.

Every agent action is recorded: what it did, with which document and at which step.

ONE PROCESS, BEFORE AND AFTER

An incoming letter: four of five steps done by agents

1	2	3	4	5
Register	**Assign**	**Draft a reply**	**Sign**	**Send**
d8n Inbox	d8n Legal and d8n Inbox	d8n Assistant	Manager, a person	d8n Inbox
~5 sec	~5 sec	~1 min	1–2 min	~5 sec

2–3 min

per letter, instead of 1.5–4 hours

The signature stays with the manager, who reads a short summary; the original document is one click away. Times are estimates for a typical incoming letter.

ANY PROCESS

Start with a process you know, then add the next

Each solution is a ready set of agents, routes and templates. Your own processes are built without code.

General document flow

Incoming, outgoing and internal documents, appeals, assignments

HR

From hiring to archive, leave and HR documents

Finance

Payment requests, acts, settlements, reporting

Contracts and legal

Review, approval and signing of contracts

Meetings

Minutes and control of assignments

Regulatory documents

Policies with versions, approval and sign-off

Customer support

First-line answers from company knowledge

Your process

No-code builder and custom agents

Agents: d8n Inbox · Legal · HR · Finance · Executive · Support · Sales · Assistant · custom agents

TRUST AND CONTROL

More context, clear boundaries

1

Access rights

The agent sees only the data its role allows. Access to mail, files and documents follows roles.

2

Instructions and route

The agent performs only the actions permitted at its step of the process.

3

Human approval

A person is brought in where the rules require it. Every action is logged.

Data stays where you decide

In your country, on your servers or in d8n's protected environment. A local LLM is a configuration option, with no data sent to external models.

Answers with sources

Answers link to source documents. Knowledge Steward flags outdated or conflicting facts for their owners to confirm.

Certified

d8n.ai Enterprise 8.0.0: ST RK ISO/IEC 15408-3-2024, EAL 4 (national certification, Kazakhstan).

CROSS-BORDER DOCUMENT FLOW

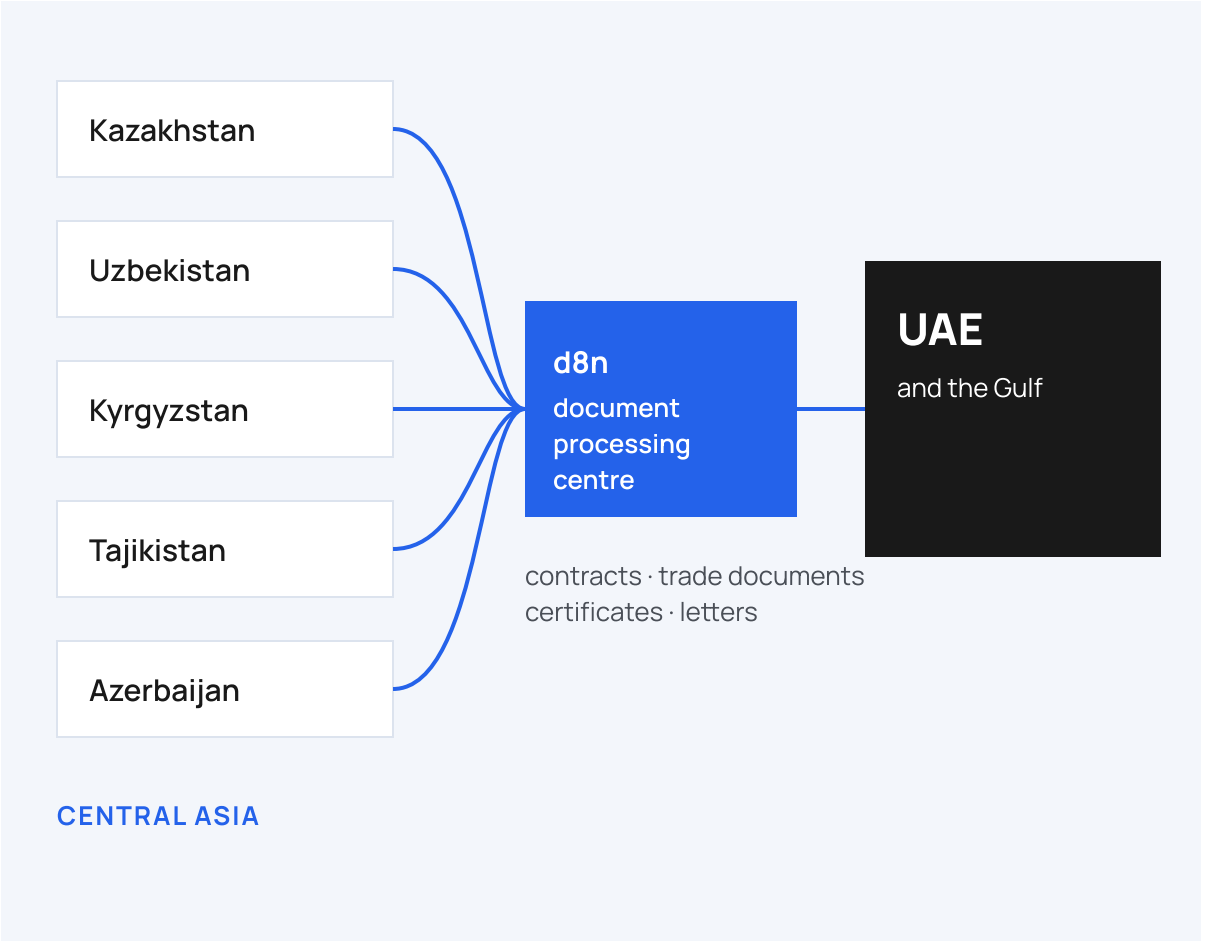

Documents should move as fast as goods

The document processing centre connects a company with its counterparties: send letters, sign contracts and track execution, within one country and across borders. Accepted signature types are set per process, according to each country's requirements.

Central Asia ↔ UAE. One route for contracts, trade documents and certificates between the region and the Gulf.

Mutual recognition of e-signatures. In 2026 we signed a memorandum with Xinjiang CA on mutual recognition of Kazakh and Chinese e-signatures.

International signing. Counterparties abroad sign on any device, under recognised international standards.

WHO WE ARE

Built on 19 years of document management

2007

Documentolog automates business processes in Kazakhstan since 2007

≈150,000

companies use our e-document service

≈1 million

users in the ecosystem

In December 2025 we launched d8n.ai, a multi-agent AI Business Operating System. Our clients include government bodies, banks, national companies and global brands, among them Tengizchevroil, the National Bank of Kazakhstan, Huawei, Samsung, Nestlé, Coca-Cola and Amway.

Documentolog is an AI-first company: we run our own work on d8n.

HOW TO WORK WITH US

Direct contracts and partnerships

Direct

For organisations

Start with a pilot: three months, one process, in the d8n cloud. We measure employee time, processing time and cost per operation.

Cloud subscription to d8n.ai, with data in your country where d8n runs a local cloud.

Deployment in your perimeter, on your servers, with a local LLM if needed.

Then scale: add the next process once the first one shows a measured result.

Partners

For partners

Implementation and integration partners who deliver d8n projects in their markets.

Country and reseller partners who bring d8n to new markets.

Technology partners: connectors, MCP, e-signature and trust service providers.

Cross-border partners: certification authorities and operators for mutual recognition of documents.

d8n.ai

Which process should we start with?

We start with one process and measure the effect. Then the next one.
